

K-12 PROJECT EXPERIENCE

GS&C has served the educational community over the past thirty years in the roles of friend, advisor and professional consultant.

Our goal in every educational facility is to meet the needs of the school district, students and staff while simultaneously creating an inspirational learning environment. We have assembled a team of architects that have both educational design expertise and enthusiasm for these projects. We are passionate about education and like to be engaged in not only the design of educational facilities, but the entire process working hand-in-hand with the school district and educational community.

In that regard, GS&C has been involved in bond package preparations, land acquisition, and establishing school district design standards, as well as attending student presentations, career fairs, campus advisory councils, Austin Partners in Education events and other similar educational organization's events. We have also participated in seminars, conventions and associations that focus on education and educational design. We are active in The Council of Educational Facility Planners International and frequently learn a great deal while visiting existing campuses.

Austin Independent School District

- Southwest Middle School
